DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Breunsbach et al.

Breunsbach et al. disclose an apparatus which thermally protects a motor of a spray system which operates to maintain a user selected controlled pressure, the apparatus comprising a temperature sensor 66 which monitors the temperature of the motor and a controller 20 which reduces the pressure when the motor temperature exceeds a predetermined level by terminating the spray cycle. The apparatus will carry out the method since it comprises the required structural limitations and the teaching can be applied to a variable speed electric sprayer also.

3. Claims 5-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Breunsbach et al. in view of Baker.

Breunsbach et al. disclose an apparatus which thermally protects a motor of a spray system which operates to maintain a user selected controlled pressure, the apparatus comprising a temperature sensor 66 which monitors the temperature of the motor and a controller 20 which reduces the pressure when the motor temperature exceeds a predetermined level by terminating the spray cycle. Baker teaches a temperature

sensitive control valve which reduces flow pressure when a temperature rise is detected. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the device of Breunsbach et al. by incorporating a valve to reduce the controlled pressure when the fluid temperature exceeds a predetermined level. The valve can also be used to reduce the pressure when the temperature of the motor exceeds a predetermined level since the concept of pressure reduction due to an increase in temperature has been taught by Baker. The apparatus will carry out the method since it comprises the required structural limitations and the teaching can be applied to a variable speed electric sprayer also.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 1, 3, and 5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
6. Claims 1, 3, and 5 each recite the limitation "the temperature" in line 3. There is insufficient antecedent basis for this limitation in the claim.
7. Claims 3 and 5 each recite the limitation "the control." There is insufficient antecedent basis for this limitation in the claim.
